

Assignment - 1

Name: Hasini

Roll Number: 2303A510G3

Batch - 03

AI Assisted Coding

09-01-2026

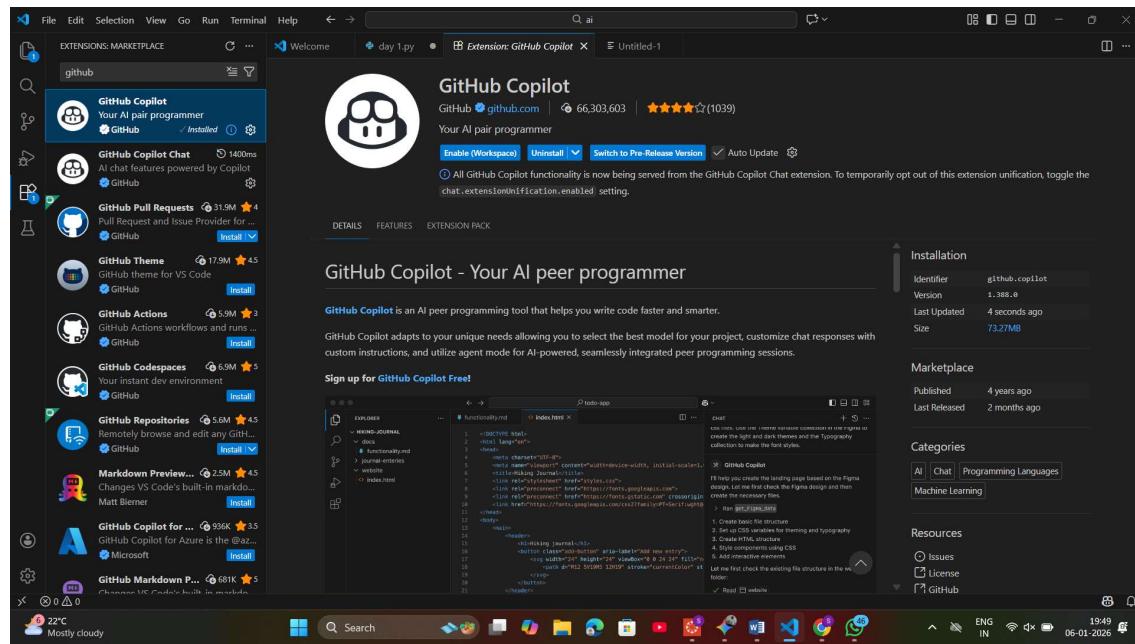

Task 0: Environment Setup:-

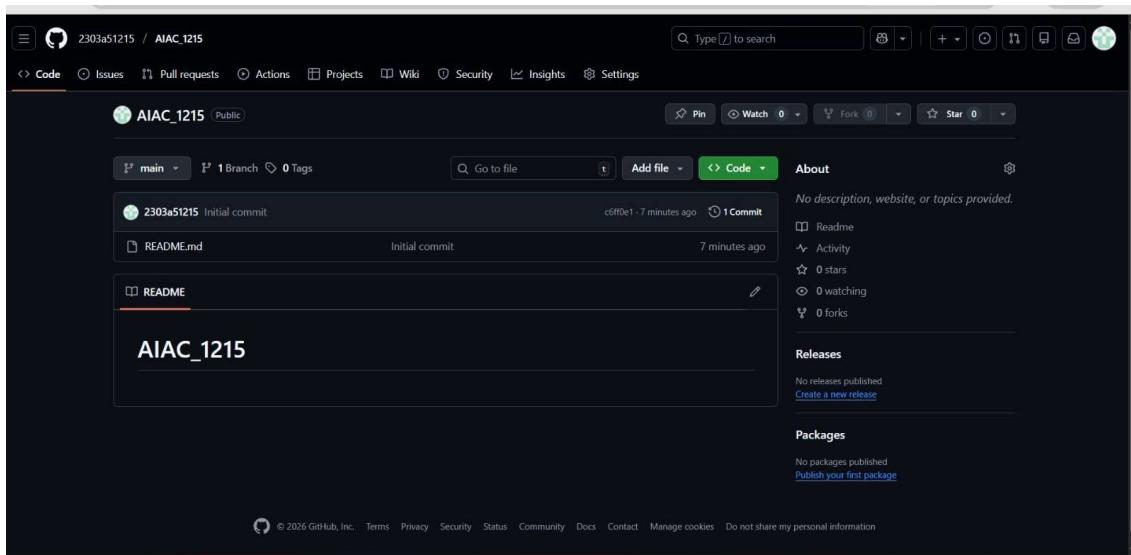

Task 0

- Install and configure GitHub Copilot in VS Code. Take screenshots of each step.

Expected Output

- Install and configure GitHub Copilot in VS Code. Take screenshots of each step.

Task 1: Non-Modular Logic (Factorial):-

: AI-Generated Logic Without Modularization (String Reversal Without Functions)

❖ Scenario

You are developing a basic text-processing utility for a messaging application.

❖ Task Description

Use GitHub Copilot to generate a Python program that:

- Reverses a given string
- Accepts user input
- Implements the logic directly in the main code
- Does not use any user-defined functions

❖ Expected Output

- Correct reversed string
- Screenshots showing Copilot-generated code suggestions

➤ Sample inputs and outputs

The screenshot shows the Visual Studio Code interface. The left pane displays a file named 'task1.py' with the following code:

```
C:\> Users > hp > OneDrive > Desktop > ai > task1.py > ...
1 # Accepting user input
2 user_input = input("Enter a string to reverse: ")
3
4 # Initializing an empty string to store the result
5 reversed_string = ""
6
7 # Logic to reverse the string using a loop
8 for i in range(len(user_input) - 1, -1, -1):
9     reversed_string += user_input[i]
10
11 # Printing the result
12 print("Original String:", user_input)
13 print("Reversed String:", reversed_string)
```

The right pane shows the terminal output:

```
PS C:\Users\hp> & C:/Users/hp/AppData/Local/Microsoft/WindowsApps/python3.13.exe c:/Users/hp/OneDrive/Desktop/ai/task1.py
Enter a string to reverse: 2 3 4 5 6
Original String: 2 3 4 5 6
Reversed String: 6 5 4 3 2
PS C:\Users\hp>
```

The status bar at the bottom indicates the terminal has 13 lines, 43 columns, and is using UTF-8 encoding.

Task 2: AI Code Optimization:-

Efficiency & Logic Optimization (Readability Improvement)

❖ Scenario

The code will be reviewed by other developers.

❖ Task Description

Examine the Copilot-generated code from Task 1 and improve it by:

➤ Removing unnecessary variables

➤ Simplifying loop or indexing logic

➤ Improving readability

➤ Use Copilot prompts like:

- “Simplify this string reversal code”

- “Improve readability and efficiency”

Hint:

Prompt Copilot with phrases like

“optimize this code”, “simplify logic”, or “make it more readable”

❖ Expected Output

➤ Original and optimized code versions

➤ Explanation of how the improvements reduce time complexity

The screenshot shows a code editor window with a dark theme. The file 'task1.py' contains the following code:

```
C:\> user_input = input("Enter a string: ")
2 # Using Python's slicing for maximum efficiency
3 reversed_string = user_input[::-1]
4 print(f"Reversed: {reversed_string}")
```

Below the code editor is a terminal window showing the execution of the script:

```
PS C:\Users\hp\OneDrive\Desktop\ai> & 'c:\Users\hp\AppData\Local\Microsoft\WindowsApps\python3.13.exe' 'c:\Users\hp\vscode\extensions\ms-python.debugpy-2025.18.0-win32-x64\bundled\libs\debugpy\launcher' '50075' '...'; c:\Users\hp\OneDrive\Desktop\ai\task1.py
Enter a string: 48 50 60 70
Reversed: 70 60 50 48
PS C:\Users\hp\OneDrive\Desktop\ai>
```

The terminal also shows the Python and Python Deb... extensions loaded.

Task 3: Modular Design Using AI Assistance (String Reversal Using Functions)

❖ Scenario

The string reversal logic is needed in multiple parts of an application.

❖ Task Description

Use GitHub Copilot to generate a function-based Python program that:

- Uses a user-defined function to reverse a string
- Returns the reversed string
- Includes meaningful comments (AI-assisted)

❖ Expected Output

- Correct function-based implementation
- Screenshots documenting Copilot's function generation

➤ Sample test cases and outputs

The screenshot shows the VS Code interface. The top part displays the code for `task1.py`. The bottom part shows the terminal window with the following output:

```
5 4 3 2 1
5 4 3 2 1
PS C:\Users\hp\OneDrive\Desktop\ai> ^C
PS C:\Users\hp\OneDrive\Desktop\ai>
PS C:\Users\hp\OneDrive\Desktop\ai> c;; cd 'c:\Users\hp\OneDrive\Desktop\ai'; & "c:\Users\hp\AppData\Local\Microsoft\WindowsApps\python3.13.exe" "c:\Users\hp\vscode\extensions\ms-python_on.debugpy-2025.18.0-win32-x64\bundled\libs\debugpy\launcher" '5d371' '--' 'c:\Users\hp\OneDrive\Desktop\ai\task1.py'
Enter text: Teju
Result: ujeT
PS C:\Users\hp\OneDrive\Desktop\ai>
```

Task 4: Comparative Analysis – Procedural vs Modular Approach (With vs Without Functions)

❖ Scenario

You are asked to justify design choices during a code review.

❖ Task Description

Compare the Copilot-generated programs:

➤ Without functions (Task 1)

➤ With functions (Task 3)

Analyze them based on:

➤ Code clarity

➤ Reusability

➤ Debugging ease

➤ Suitability for large-scale applications

❖ Expected Output

Comparison table or short analytical report

Feature	Procedural (Without Functions)	Modular (With Functions)
Code Clarity	Easy for tiny scripts; messy for large ones.	Very high; logic is isolated and named.
Reusability	Must copy-paste code to use it again.	Can be called anywhere in the app.
Debugging	Harder to isolate where an error occurs.	Easy to unit test the specific function.
Scalability	Not suitable for large applications.	Essential for professional development.

Task 5: AI-Generated Iterative vs Recursive Fibonacci Approaches (Different Algorithmic Approaches to String Reversal)

❖ Scenario

Your mentor wants to evaluate how AI handles alternative logic paths.

❖ Task Description

Prompt GitHub Copilot to generate:

- A loop-based string reversal approach
- A built-in / slicing-based string reversal approach

❖ Expected Output

- Two correct implementations

➤ Comparison discussing:

- Execution flow
- Time complexity
- Performance for large inputs
- When each approach is appropriate.

A screenshot of the Visual Studio Code interface. The left sidebar shows icons for file operations like Open, Save, Find, and Copy/Paste. The main editor area displays a Python script named 'task1.py' with the following code:

```
C:\> Users > hp > OneDrive > Desktop > ai > task1.py > ...
1  def reverse_iterative(input_string):
2      reversed_str = ""
3      for char in input_string:
4          reversed_str = char + reversed_str
5      return reversed_str
6
7  def reverse_slicing(input_string):
8      return input_string[::-1]
9
10 test_input = input("Enter a string: ")
11
12 print(reverse_iterative(test_input))
13 print(reverse_slicing(test_input))
```

The bottom section of the interface shows the terminal tab, which displays the command-line output of running the script:

```
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS
+ - ... | ⚡ ×
s\debugpy\launcher` '59d36' `--> 'c:\Users\hp\OneDrive\Desktop\ai\task1.py'
PS C:\Users\hp\OneDrive\Desktop\ai>
PS C:\Users\hp\OneDrive\Desktop\ai> c;; cd 'c:\Users\hp\OneDrive\Desktop\ai'; & 'c:\Users\hp\AppData\Local\Microsoft\WindowsApps\python3.13.exe' 'c:\Users\hp\vscode\extensions\ms-python.on.debugger-2025.18.0-win32-x64\bundled\libs\debugpy\launcher' '57517' `--> 'c:\Users\hp\OneDrive\Desktop\ai\task1.py'
on.debugger-2025.18.0-win32-x64\bundled\libs\debugpy\launcher` '57517' `--> 'c:\Users\hp\OneDrive\Desktop\ai\task1.py'
Enter a string: 1 2 3 4 5
5 4 3 2 1
PS C:\Users\hp\OneDrive\Desktop\ai>
```

Below the terminal, a message indicates indexing completion: **Indexing completed.**
